### **E. H. Wachs Launches You Tube Video Campaign for Customer Support and Product Knowledge**

Wachs is pleased to announce four new videos that are available for viewing on its YouTube channel. These videos highlight products and tools designed to help project managers, welding contractors and field machinists estimate production times, specify product and generally learn more about pipe cutting, beveling, and weld prep best practices.

Now project managers, welding contractors and field machinists can learn about the Wachs Online [Cut Time Calculators](#) via the You Tube website to calculate estimates when bidding on a pipe maintenance or pipe repair job. Users can now better budget labor time with the [Pipe Cutting and Weld Prep Calculator](#). See the video at this link: <http://youtu.be/5rmnohfOmNO>.

The newest Wachs video is the [Oil & Gas, Refining Pipe Repair & Pipe Maintenance](#) video. This video demonstrates machines in the field; where you would find the equipment; benefits of using cold cutting equipment and simultaneous cutting and beveling. See the video at: <http://youtu.be/AbnqQ3iJtOY>

Wachs' [Pipeline Maintenance Equipment](#) video exhibits machining methods, applications, weld preps and benefits of using cold cutting (machining) versus torch cutting and grinding for weld preps. See it at: <http://youtu.be/QQIZy7-1TFc>

The [Pipe Cutting and Beveling](#): E. H. Wachs Trav-L-Cutter video illustrates this machine's uses in the field, industries to find the equipment, preliminary specifications and machine operations. See the video at: <http://youtu.be/xx2wGSb2fcl>
